V1 AIRLIFT CONTROLLER MOUNT FITTING INSTRUCTIONS®

1. Pass the micro-USB cord through the mount and connect it to the controller. Then slot together.
2. Place the taper lock plug into the 12 Volt socket with the M6 Nut facing towards the dash.
3. Take the controller and sit it on the plug. Rotate the controller to find the best viewing angle. Mark or remember this and remove the upper half.
4. With the plug orientated, screw in the provided M6 Cap head until the plug is firm and does not rotate. **Do not overtighten.**
5. Place the controller back on the socket and lightly screw in the second M6 Cap head, adjust for final viewing angle and tighten to complete the installation!

You are now good to go. Enjoy!

If you have any feedback regarding the design and how to modify/improve it. Feel free to PM me or email at sambenjaminjones@outlook.com. Keep an eye out for more specialty parts for the focus and fiesta lines. This part is subject to copyright, Jones Sports Australia
